

Dear HR Team,

I am writing to express my interest in a DevOps role at your esteemed organization and to highlight my transition from a Telephony Engineering background into the DevOps and cloud domain. Over the course of my career, I have worked extensively on in-house telephony systems, managing Linux-based and Dockerized environments, automating manual testing processes, and ensuring system reliability through monitoring and performance analysis. These responsibilities naturally aligned me with DevOps principles such as automation, observability, and infrastructure reliability.

To formally strengthen my DevOps skill set, I have completed the Certified Kubernetes Administrator (CKA) and AWS Certified Cloud Practitioner (CCP) certifications. Alongside certifications, I have worked on hands-on projects using Terraform to provision AWS infrastructure, containerized applications, Kubernetes deployments, CI/CD automation using scripting, and system monitoring using Prometheus and Grafana. These projects have helped me apply DevOps concepts in practical, real-world scenarios.

My background as a Telephony Engineer has given me strong troubleshooting skills, a deep understanding of distributed systems, and experience working in high-availability environments. I am comfortable working on Linux systems, analyzing performance issues, and collaborating with cross-functional teams to improve system stability and delivery workflows. I believe this foundation, combined with my DevOps training and project experience, enables me to add value quickly in a DevOps role.

I am highly motivated to continue growing in the DevOps and cloud engineering space and am eager to contribute to a team where automation, scalability, and reliability are key priorities. I would welcome the opportunity to discuss how my background and hands-on experience can support your engineering goals.

Thank you for your time and consideration.

Kind regards,
Asad Javed
